

Customized folding bellows

Customized folding bellows: translucent or coloured

The functional grey colour normally seen on folding bellows can be exchanged for colour or even translucent materials. The translucent folding bellows allow more light into dark areas of an articulated bus, giving the bus a friendly atmosphere and providing passengers with a greater sense of security.

Coloured folding bellows can be used to give an articulated bus a customized wrap. This can benefit the images of both public transportation and the city overall. The wrap design can be a single colour or many colours; for example, it can match the transport company's vehicle design.

This allows an uninterrupted continuation of the vehicle design between the vehicle elements, without any separation by a grey-coloured folding bellow.

We would be pleased to show you possibilities for folding bellow designs, customized to your vehicle design requirements.
